|----------------|------------------------------------------------------|
| Case Reference | TEST1234                                             |
| Package Name   | com.evil.app.testlongpackagename.verylongindeed.test |
| Malware Family | Ransomware / RAT                                     |
| SHA-256 Hash   | 8d3e23f0...longhash...                               |
| File Size      | 0 bytes                                              |
| RISK SCORE     | 85/100 — CRITICAL                                    |

## EXECUTIVE AI SUMMARY

This app is extremely malicious. It attempts to steal SMS, intercept notifications, and use accessibility services to perform overlay attacks on banking apps. Highly obfuscated using an unknown packer.

**Behavioral Narrative:** At runtime, the app hid its icon, connected to a Telegram bot, and attempted to load a dynamic dex file.

## SEMANTIC CAPABILITIES (STATIC INFERENCE)

The following capabilities were statically inferred from component names:

- Remote Access Trojan (RAT)
- Screen Locker / Ransomware Module
- Accessibility Service Abuse

## STATIC ANALYSIS FINDINGS

Obfuscation Score: 8/10

YARA Rules Matched: 3

**Dangerous Permissions (2):**

SEND\_SMS, BIND\_ACCESSIBILITY\_SERVICE

## DYNAMIC ANALYSIS (FRIDA RUNTIME HOOKS)

Total runtime events captured: 30. Showing top 20 critical events:

| API / Action                 | Data / Details                                                                   |
|------------------------------|----------------------------------------------------------------------------------|
